Journal of PHYSICAL ORGANIC CHEMISTRY

AIMS AND SCOPE

The Journal of Physical Organic Chemistry provides an international forum for the rapid publication of original scientific papers dealing with physical organic chemistry in its broadest sense. As such, it is aimed at scientists working in this field, not only in chemistry itself, but also in biochemistry and pharmaceutical chemistry, and in other areas of research in which the approaches used in physical organic chemistry are now applied.

The Journal of Physical Organic Chemistry will devote particular attention to the following fields: Organic chemistry; Bio-organic chemistry; Organometallic chemistry; Theoretical chemistry; Catalytic chemistry; Photochemistry; Supramolecular chemistry. Among the topics covered within the fields will be: Reaction mechanisms; Reactive intermediates; Novel structures; Spectroscopy; Chemistry at interfaces; Stereochemistry; Conformational analysis; Quantum chemical studies; Structure/reactivity relationships; Solvent, isotope and solid-state effects; Long-lived charged, sextet or open-shell species; Magnetic, non-linear optical and conducting molecules; Molecular recognition.
